Quick start

To start using the plugin just upload it to your WordPress site, install and activate it. Then go to "Appearance" -> "Menus" page and create new menu. Build a menu which is fit your needs and save it. Then select this menu in "Theme Locations" box at "Toolbar navigation menu" select. That's all, your menu will appear in Toolbar.

Edit settings

The plugin allows you to deactivate default WordPress menu. To do it go "Settings" -> "General" page and scroll down to "Toolbar Menu" section. Here you can select which predefined menu should be deactivated.

Guest menu

Additional feature of the plugin is ability to turn on Toolbar menu for guest users. This menu will include your selected menu and also could include login form to allow users to login from your front end pages.
